ALDELO®

ADVANTAGES

- **Efficient order management:** Allows staff to take orders directly from tables via mobile devices, streamlining communication between service staff and the kitchen.
- **Custom Menu Integration:** Makes it easy to create and manage custom menus, ensuring your menu is always up-to-date and accurately reflects what you offer.
- **Real-Time Inventory Control:** Automate inventory tracking by automatically recording each sale and adjusting stock levels in real-time, preventing out-of-stocks and reducing the risk of loss.
- **Simplified staff management:** Facilitates task assignment, schedule tracking, and tip management, contributing to a more organized and collaborative work atmosphere

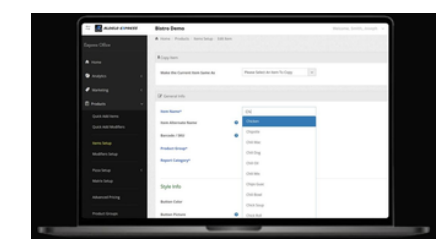

- **Leading the restaurant POS industry with AI automation services**

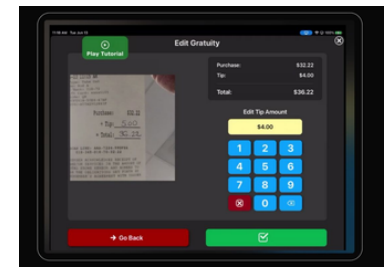

Facial Recognition Login

Through a simple “face detection, face capture, and face match,” Facial Recognition Login utilizes biometrics to map facial features and compares the information with known faces stored and secured on the Aldelo Cloud. This not only secures access to the point of sale, but protects manager functions and secures employee timecards.

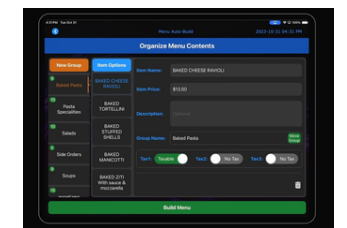

Menu Item Prediction

When building a menu, uses AI technology to detect the word being typed and present several menu item naming options for operators to choose from. The technology enhances the menu building experience and improves menu item naming consistency and overall menu conformity.

Tip Adjust Automation

Eliminates time merchants spend manually finding, entering, or editing inaccurate check values. Reduces customer disputes and chargebacks by identifying and auto-correcting errors caused by inaccurate “Tip” or “Total” values handwritten on customer receipts before finalizing the transaction.

Menu Builder

Enables operators to enjoy a “scan-and-go” menu building experience whether they are setting up their POS menu database for the first time, or updating an existing menu with new items, prices, or item descriptions.
