TEEPOS

TONIC POS is a point-of-sale (POS) integration system that offers complete solutions for restaurants, bars, clubs and the hospitality industry in general. It focuses on making advanced POS integrations accessible and affordable for businesses of all sizes.

tonic.

Positive Features:

Cloud Connectivity: From the moment the Tonic system is first installed, your receipts, orders, menus, timesheets, and everything that runs your business will be secure and accessible in the cloud from all of your devices

Advanced Integrations: Tonic is designed to seamlessly integrate with your favorite software like Quickbooks, HotSchedules, Restaurant365, and many others, ensuring maximum efficiency, improved accuracy, and enhanced analytics

Security & Compliance: Tonic's security exceeds industry standards in every aspect. Your customer data and payment methods will be protected throughout the entire payment capture process, ensuring you remain PCI compliant at every step

Table Service: Whether you're taking payment at the table or at the cashier, you'll get the same fast service throughout your establishment. Even tableside transactions won't have to sacrifice options like eco-friendly digital receipts or customizable tips

Secure Transactions: Tonic ensures transactions are secure, which is essential for customer trust and business reputation

Simplified Ordering: With Tonic, the ordering process is streamlined, improving customer experience and service efficiency

TEEPOS

Tonic POS is designed for a wide range of hospitality concepts, including casual and fine dining restaurants, delivery services, food trucks, and quick service establishments. Its versatility makes it suitable for an extensive network of clients in the US and eight other countries.

What sets Tonic POS apart from other systems is its commitment to accessibility and affordability, as well as its focus on innovation. It offers world-class POS software with the expertise and support of local partners, meaning restaurants and bars don't have to choose between impersonal multinational POS systems or substandard local technology.
